

Safety and security for you and your family

Schlage® LiNK™ puts you in control by enabling you to manage and communicate with your home and its security features – locks, lights, sensors and more.

You shape the what, how and where – your Schlage LiNK solution works with an array of compatible products you can choose from and add to over time.

Here are just some of the ways you can use Schlage LiNK to manage security at any home or rental property you own:

- Unlock a door for the plumber when you're at the office.
- Assign cleaners scheduled lock codes for one-time or limited recurring access.
- Use wireless cameras to see for yourself what's going on when you're away.
- Trigger the lights to turn on when a door is unlocked so you never have to walk into a dark home.
- Remotely assign holidaymakers an access code to your holiday home that can be deleted after the holiday.

Live freely

Maintaining a home can tie you down, whether you're in town, traveling far from home or managing a holiday/rental property.

Schlage LiNK is the answer that keeps you connected. It gives you simple remote access to your home systems – locks, lights, cameras, small appliances – via the web from your smartphone or computer. You can take care of your home, visitors and all the details of managing your home, at any moment, from anyplace.

With all of its remote control capabilities, Schlage LiNK is just like being there:

- Easily set schedules to activate lights.
- Let in friends, workers or new renters from across town or across the country.
- Scheduling lighting or security like "After work" or "Renters just left" is like putting your home on automatic reset.
- Receive notifications when the kids arrive home from school.
- Take care of things you forgot to do: lock a door, switch off a light.
- Uneasy feeling about your house? Just check Schlage LiNK and be sure.
